

March 21, 1952

Dr. D. M. Bonner
Osborn Botanical Laboratory
Yale University
New Haven, Connecticut

Dear Dave:

Enclosed is W-1485. I don't know whether this is the S strain (there is some confusion as to just which culture has been so dubbed) but it is a lambda-sensitive obtained directly from K-12, and one that Esther is using routinely.

The Hayes Affaire is a long, long story. I'll tell you about it here.

Esther and I will be very pleased to see the Bonners. Why don't you stay over with us? If you can give us a call from Milwaukee, we'll know just when and how to expect you.

Sincerely,

Joshua Lederberg
